

# AllPure RNA Purification Kit (RNA產物收集,非萃取)

# Cat. No. ABTGNA701

Storage: at room temperature (15°C-25°C) in a dry place for one year

#### Description

AllPure RNA Purification Kit uses silica-based spin column for specific RNA binding. The kit can be used for RNA purification from DNase I-treated total RNA, in vitro transcription product, RNA-labelled product, synthetic RNA. This kit permits effective removal of proteins, organic chemicals, inorganic salt ion and other impurities. Purified RNA is suitable for RT-PCR, qRT-PCR, Northern blot and other applications.

# Kit Contents

Component	25 rxns
Binding Buffer 12 (BB12)	10 ml
Wash Buffer 12 (WB12)	8 ml
RNase-free Water	1.5 ml
RNase-free Tube (1.5 ml)	25 each
RNA Spin Columns with Collection Tubes	25 each

# Procedures

Please add 20 ml of 96%-100% ethanol to WB12 before use. All centrifugation are performed at room temperature.

Reagents provided by customers: chloroform, 96%-100% ethanol

- 1. Transfer ≤100 μg RNA sample into a microcentrifuge tube and supplement to 100 μl with RNase-free water. Add 350 μl of BB12 (add 10 μl β-mercaptoethanol for per ml BB12, and it must be freshly prepared before use). Mix thoroughly by inverting or vortexing.
- $2. Add 900 \mu l of 96\%-100\%$  ethanol (precipitates may form at the stage). Mix thoroughly by inverting or vortexing.
- 3. Transfer half volume of solution and precipitates together to a spin column. Centrifuge at 12,000×g for 30 seconds at room temperature. Discard the flow through.
- 4. Repeat step 3 with the remaining half volume of the solution.
- 5. Add 500 μl of WB12 (Check to be sure ethanol has been added) into the spin column. Centrifuge at 12,000×g for 30 seconds at room temperature. Discard the flow through.
- 6. Repeat step 5 once.
- 7. Centrifuge at 12,000 ×g for 2 minutes at room temperature. Air-dry the column matrix for several minutes.
- 8. Place the spin column into a clean 1.5 ml RNase-free tube. Add 15-50 μl RNase-free Water into the spin column matrix and incubate at room temperature for 1 minute.

Tel: +886 988-628969

- 9. Centrifuge at 12,000×g for 1 minutes to elute RNA.
- 10. Store the purified RNA at -80°C.
